WDA Barrel Washer

Wyma's Barrel Washer gently and effectively washes fresh produce while removing soil and small stones.

Potatoes • Carrots • Parsnips • Swedes • Turnips • Beetroot • Celeriac and more

Our WDA Barrel Washer is a cost-effective machine. It effectively and gently washes fresh produce while removing soil and small stones. Produce can be partially or fully submerged during washing.

As the perforated barrel rotates, vegetables rub against each other and against the barrel for a gentle clean. Agitation bars inside the barrel maximise washing performance.

Soil and debris collect in the hoppers underneath the barrel. Dump valves regularly clear debris build-up. Cleaning bars can be fitted to rinse the inside of the barrel.

The outfeed elevator allows you to choose the outfeed height for your produce and provides gentle handling.

Produce Soil & sand

Features and benefits

- A Outfeed elevator
- B Removable side panels
- C Variable speed controlled barrel
- D Adjustable outfeed gate (manual or automatic*)
- E Agitation bars inside the barrel
- F Inspection hatches
- G Drive system positioned out of the water
- H Automatic dump valves*
- I Perforated barrel
- J Barrel stabiliser and alignment rollers

Internal cleaning bars

- Gentle produce handling, at high speeds if needed
- Outfeed height can be set to suit your needs
- Gooseneck available* for gentle drop onto next piece of equipment
- Easy access to internal parts
- Change produce wash intensity by adjusting barrel rotation speed
- Holds produce in the barrel for a more intense wash
- Gives the best cleaning results
- Quick and easy cleaning and maintenance access
- Easy access
- Longer life for drive system
- Controlled, periodic removal of sand and dirt
- Produce can run partially or fully submerged
- Barrel stays stable as it rotates
- Automatic barrel rinsing and cleaning
- Reduces manual cleaning time
